

TK Trichokare Special

Breathe New Life Into Your Scalp For More Beautiful Hair

For strong, healthy tresses, your care routine starts at the scalp with TK Trichokare.

Deep-conditioning sessions can soften and improve the appearance of your strands, but to actually have healthy, strong and glossy hair, the spotlight should be on your scalp. The healthier your scalp is, the denser and more resilient your tresses could be. And just like how repairing treatments can reduce damage in over-processed tresses, regular scalp treatments can help maintain the health of your scalp for a more beautiful head of hair.

EXPERT CARE

At TK Trichokare, your scalp will be cared for professionally by a team of experts certified trichologists who understand the chemistry and effects of haircare ingredients, lifestyle and nutrition on the hair and scalp; hair specialists who are able to recommend the most suitable treatment programme for each individual concern; and therapists who complete the experience by administering the indulgent treatments.

PREMIUM EUROPEAN HERBAL HAIR REMEDIES

Each treatment utilises European herbal hair remedies, formulated with premium botanical ingredients trusted by herbalists to regenerate, restore and revive the scalp to its optimal state. Herbs found in the products used during the treatment include jojoba extract, which balances your scalp's pH levels; aloe vera to hydrate and soothe irritated and sensitive scalp, and burdock extract to target dandruff.

REVIVE YOUR SCALP

Although each treatment can be customised according to specific concerns, they all follow the three-stage Hair Fall Preventive Treatment Programme. After the Tricho-Scan scalp analysis, the Hair Fall Preventive Treatment Programme commences with the first step, which returns the scalp to a neutral state. This step gently removes impurities and regulates sebum production, and is suitable for the most sensitive skin types. The second step is said to stimulate follicle metabolism by improving blood circulation and oxygen flow in the scalp, preventing follicles from shrinking and going dormant. The final step nourishes the scalp with concentrated, mineral-rich extracts to supposedly activate hair follicles and boost cell acceleration. The hair's shine is restored, while the scalp is soothed and protected, so it is less susceptible to chemical burns from bleaching or perms.

XIAXUE'S HAIR WOES

Known for her signature mane of ever-changing hues, top blogger Xiaxue struggled with a sensitive scalp exacerbated by constant bleaching. Her hair was tangled and weak, while her scalp was flaky and irritated. A scan showed itchy red scabs and inflammation all over her scalp, a common ailment caused by bleach damage. Her treatment included a soothing formula to calm inflammation, a scaling process to remove dead skin, and antibacterial botanicals to keep her scalp infection-free. Xiaxue reports: "What a surprise Trichokare brings, a new dimension to my scalp health! Hair styling is now completely effortless."

There is no scientific proof that any product (except certain registered medicinal products) or service can retard hair loss or promote hair growth.

SHOP SMART! Simply Her readers get to enjoy the Hair Fall Preventive Treatment with an energising and restorative Botanical Scalp Ampoule at \$59.99 (worth \$616 in total).
